HW Assignment-3

Question 1

Probability distribution of a Gaussian distribution

$$P(x|\mu, V) = \frac{1}{\sqrt{2\pi V}} e^{-\frac{(x-\mu)^2}{2V}}$$

The probability values of the Gaussian Distribution over X

$$P(X|\mu, V) = \prod_{i=1}^{n} \frac{1}{\sqrt{2\pi V}} e^{-\frac{(x_i - \mu)^2}{2V}}$$

Taking the log-likelihood (£)

$$\begin{split} \pounds &= \log \prod_{i=1}^{n} \frac{1}{\sqrt{2\pi V}} e^{-\frac{(x_{i} - \mu)^{2}}{2V}} = \sum_{i=1}^{N} \log \left(\frac{1}{\sqrt{2\pi V}} e^{-\frac{(x_{i} - \mu)^{2}}{2V}} \right) = \sum_{i=1}^{N} \left(\log \frac{1}{\sqrt{2\pi V}} + \log e^{-\frac{(x_{i} - \mu)^{2}}{2V}} \right) \\ \pounds &= \sum \left(\log 1 - \log \sqrt{2\pi V} + \log e \cdot -\frac{(x_{i} - \mu)^{2}}{2V} \right) = \sum \left(\frac{1}{2} \cdot \log 2\pi V - \frac{(x_{i} - \mu)^{2}}{2V} \right) \\ \pounds &= -\frac{N}{2} \cdot \log 2\pi V - \frac{1}{2V} \sum (x_{i} - \mu)^{2} \end{split}$$

To find the MLE of log-likelihood we maximize the function by taking partial derivative of μ and V and set it to zero.

MLE of μ

$$\frac{\partial \mathcal{E}}{\partial \mu} = 0 = -\frac{1}{2V} \sum_{i=1}^{N} \frac{\partial}{\partial \mu} (x_i - \mu)^2 = -\frac{1}{2V} \sum_{i=1}^{N} 2(x_i - \mu) \cdot -1$$

$$\sum_{i=1}^{N} x_i - \sum_{i=1}^{N} \mu = \sum_{i=1}^{N} x_i - N\mu = 0$$

$$\sum_{i=1}^{N} x_i = N\mu$$

$$\mu = \frac{1}{N} \sum_{i=1}^{N} x_i$$

MLE of V

$$\begin{split} \frac{\partial \mathcal{E}}{\partial V} &= 0 = -\frac{N}{2} \cdot \frac{1}{2\pi V} \cdot 2\pi + \frac{1}{2V^2} \sum (x_i - \mu)^2 = -\frac{N}{2V} + \frac{1}{2V^2} \sum (x_i - \mu)^2 \\ \frac{N}{2V} &= \frac{1}{2V^2} \sum (x_i - \mu)^2 \\ V &= \frac{1}{N} \sum (x_i - \mu)^2 \end{split}$$

Question 2

Method 1

Use Kit Test\Disease	Yes	No	
Positive	90	792	882
Negative	10	9108	9118
	100	9900	10000

$$P(disease \mid + ve) = \frac{90}{882} = 0.102 = 10.2\%$$

Method 2

$$P(disease) = 0.01$$

$$P(+ve \mid disease) = 0.9$$

$$P(+ve \mid no \ disease) = 0.08$$

$$P(disease \mid +ve) = \frac{P(+ve \mid disease) * P(disease)}{P(+ve)} = \frac{0.9 * 0.01}{0.0882} = 0.102 = 10.2\%$$

$$P(+ve) = P(+ve \mid disease) * P(disease) + P(+ve \mid no disease) * P(no disease)$$

$$P(+ve) = 0.9 * 0.01 + 0.08 * 0.99 = 0.0882$$
